

## DATASHEET Rodalloy 625 – MIG – TIG

### Description and Applications

Rodalloy 625 is developed for welding of Alloys 625 at working temperature from -269°C to above 1000°C.

It's suitable for welding heat resisting alloys (as Incoloy 800/800H) with other alloys for power generation and petrochemical plants and furnace equipment.

It's also suitable for overmatching corrosion-resistant welds in Alloy 825, 6%Mo superaustenitic stainless 254SMo, Alloy 28, 904L, and for overlays on valves, pumps and shafts in marine and offshore equipment where high pitting resistance (PRE>50) and tolerance to weld metal dilution is required.

In addition to the above materials, Rodalloy 625 can be used as filler metal for cladding and welding dissimilar base metals such as Ni-Cr-Mo alloys to stainless and carbon steels.
